The ability to use spoken or written language in order to express meaning is essential and enables people to cope with situations in which communication via language is indispensable. As a matter of fact, there are certain diseases that decrease an individual's ability to express him- or herself properly without decline of intelligence. In general, this phenomenon is called aphasia, which literally means without language; though the ability to speak remains in most cases. Aphasia is a disturbance in the established language system of a person due to brain injury. Some signals that might indicate that a patient is suffering from aphasia are for example: problems to build correct sentences in written and spoken language, usage of inappropriate words in certain situations, invention of neologisms, inability to recognize own mistakes (in some cases), or errors on phonological basis....
