Language: English Brand New Book ***** Print on Demand *****.Excerpt from Nutritional Physiology The making of this book has been a study in elimination. It is, therefore, necessary at the outset to indicate the limits of its scope. It is intended that it shall be used with other books. Supplementary reading upon general biology, human anatomy, food chemistry, and dietetics is greatly to be desired. In the field of physiology itself many fascinating topics are entirely ignored and others treated in bare outline, with the purpose of subordinating all else to the subject of nutrition. Chemical formulae have been excluded from the text and used but sparingly in the notes. A certain preliminary knowledge of elementary science is assumed. The key-word of the following discussion is energy. The success of the reader in gaining clear conceptions of what is presented will depend upon his familiarity with the meaning of that term. It is essential that he shall understand that energy is latent or potential in those chemical compounds which are susceptible of oxidation. He must have learned to recognize the possibility of its unending transformation. The more readily he thinks in terms of molecules, the more profitably he can read these chapters. Miss Ruth Bryant, Instructor in Biology in Simmons College, has borne a part in the work, which is to be described as collaboration rather than assistance.
