paperback. Book Condition: New. Ship out in 2 business day, And Fast shipping, Free Tracking number will be provided after the shipment. Pages Number: 163 Publisher: Science Press Pub. Date :2009-08. This book is the communication electronic circuit theory supporting the experimental program and curriculum design tutorial classes. The book is organized 15 projects and five experimental design issues. Rats were divided into experimental and comprehensive experimental basis. the basis of experiments. including small-signal amplifier tuned. high-frequency resonant power amplifier. high-frequency oscillator. mixer. etc.; comprehensive test. including amplitude modulation and demodulation. frequency modulation and frequency discriminator. second frequency. PLL and PLL Frequency Synthesizer and so on. FM communication system design issues including the launch and receiver design. digital tuning FM radio design. wireless data transceiver system design and wireless charger design. Contents: Preface Chapter 1 Basics 1.1 experimental and test prep test requirements and prepare 1.1.1 preview the contents of the experimental preparation 1.2 1.1.2 1.2.1 Experimental measurement methods and instruments experimental measurement error analysis 1.2.3 1.2.2 Experimental Data Processing 1.4 1.3 Troubleshooting routing technology and anti-jamming circuit wiring technology 1.4.2 1.4.1 Grounding Technology 1.4.3 High-frequency shielding and isolation technologies to electronic devices using the 1.5 purpose of the experiment 1.5.2...

Reviews

This ebook is really gripping and interesting. It is among the most remarkable pdf we have study. It is extremely difficult to leave it before concluding, once you begin to read the book.
